

# Monitoring: Air Quality

EDO's Time-Reactive  
RAM2000™ System

Providing a Leap Forward in Community  
Air Monitoring Protection

EDO's RAM2000™, remote air monitoring system directly detects, identifies, and measures a wide range of hazardous compounds, including Napthalene, in real-time, around-the-clock, faster and more accurately than current methods. The 10-minute report intervals allows site personnel to respond to offsite "Action Levels" in time to prevent excess emissions from reaching the community undetected.
